

01 – One-Pager Brief

Introduction

This documentation was developed by **Omar Zbibo** to provide a comprehensive and professional record of a career counseling management application. It outlines the product purpose, business problem, solution design, and overall impact. All references to organizations, data, and internal systems have been generalized to respect confidentiality.

Project Name

Career Counseling Management Application

Developed For

An education-sector organization

Target Users

- Career counselors providing one-on-one student guidance
- Administrative staff responsible for reporting and oversight

Problem

Career counseling activities relied on manual and fragmented workflows. Session data was captured through form-based tools, exported to spreadsheets, and later consolidated manually for monthly reporting. Feedback collection was handled separately, resulting in inefficiencies, duplicated effort, and delayed insights.

Outcome

A centralized low-code platform that streamlines the end-to-end counseling workflow. The application enables structured data capture, automated feedback communication, and real-time reporting through dashboards, significantly reducing manual effort and improving operational visibility.

Key Features

- Centralized counseling session logging
- Structured data storage
- Automated feedback emails after sessions

- Automated monthly and real-time reporting

Technology Stack

- **Microsoft Power Apps** – application layer
- **Microsoft Excel** – structured data storage
- **Microsoft Power BI** – analytics and dashboards
- **Microsoft Outlook** – automated communication
