

03 – Technical Specification & Architecture

Architecture Overview

The application follows a serverless, Microsoft-ecosystem-based architecture designed for reliability and ease of maintenance.

Components

- **Power Apps:** Front-end interface for data entry and user interaction
- **Excel:** Backend data source and system of record
- **Power BI:** Reporting and analytics layer
- **Outlook Integration:** Automated email communication

Data Flow

1. Counselor submits session data through Power Apps
2. Data is written to structured Excel tables
3. Power BI retrieves and transforms data
4. Dashboards refresh and display insights
5. Feedback email is sent to the student

Data Model (High Level)

Primary entity: **Session Record**

- StudentID
- SessionDate
- SessionType
- CounselorName
- SessionNotes

Security Baseline

- Access restricted to authorized internal users
- Data stored within the organization's Microsoft 365 environment
- Permissions managed through role-based access
